DOCUMENT-IDENTIFIER: US 6197544 B1

TITLE: Compounds

Detailed Description Text (5):

Polypeptides of the present invention are believed to be members of the semaphorin family of polypeptides. They are therefore of interest because the semaphorin family of proteins acts as recognition molecules and are known to be involved in controlling axon outgrowth but are also likely to participate in other biological processes including immune function and multi-drug resistance. These properties are hereinafter referred to as "SBSEMV L activity" or "SBSEMV L polypeptide activity" or "biological activity of SBSEMV L." Also included amongst these activities are antigenic and immunogenic activities of said SBSEMV L polypeptides, in particular the antigenic and immunogenic activities of the polypeptide of SEQ ID NO:2. Preferably, a polypeptide of the present invention exhibits at least one biological activity of SBSEMV L.

ABSTRACT:

SBSEMVL polypeptides and polynucleotides and methods for producing such polypeptides by recombinant techniques are disclosed. Also disclosed are methods for utilising SBSEMVL polypeptides and polynucleotides in therapy, and diagnostic assays for such.
